GREAT LAKES - Great Lakes Water Levels

The expected water levels on the Great Lakes for September 5, 2009. Connecting Channels and the St. Lawrence River, given in inches above (+) or below (-) Low Water Datum (LWD). LWD is a plane of reference used on a navigation chart. It is also known as chart Datum.

Great Lakes:

Lake Ontario +26, Lake Erie +29, Lake St. Clair +27, Lake Michigan-Huron +15, Lake Superior +7

St Lawrence River:

Above Long Sault Dam +32, Above Iroquois Dam +24, Ogdensburg +29, Alexandria Bay +27, Head of River at Cape Vincent +26.

Detroit River:

Lake Erie at Pelee Passage +29, Mouth of River at Gibraltar +28, Head of River above Belle Isle +27.

St. Clair River:

Available water depth is determined for a location by adding (if +) or subtracting (if -) the amount from the above to the water depth shown on National Oceanic and Atmospheric Administration (NOAA) navigational charts. Caution: Depths so determined are representative of a still water surface elevation, disturbed by neither wind nor other causes. Depth, however, may be reduced or increased as much as several feet for short periods of time due to these disturbances, or when sections of channels develop shoals. Vessel masters should refer to the Local Notice to

Mariners for extent of shoaling and scattered bedrock projections in all channels. For further information direct inquires to: Department of the Army, Detroit District Corps of Engineers, P. O. Box 1027, Detroit, MI 48231, (313) 226-6443. Additional information can be found on the U.S. Army Corps of Engineers Information Center website at <http://www.lre.usace.army.mil/greatlakes/hh/greatlakeswaterlevels/waterlevelforecasts/connectingchannelsforecasts/index.cfm?>.

SECTION IV - CHART CORRECTIONS

This section contains corrections to federally and privately maintained Aids to Navigation, as well as NOS corrections.

This section contains corrective actions affecting chart(s). Corrections appear numerically by chart number, and pertain to that chart only. It is up to the mariner to decide which chart(s) are to be corrected. The following example explains individual elements of a typical chart correction.

Chart Number	Chart Edition	Edition Date	Last Local Notice to Mariners	Horizontal Datum Reference	Source of Correction	Current Local Notice to Mariners

(Temp) indicates that the chart correction action is temporary in nature. Courses and bearings are given in degrees clockwise from 000 true.

Bearings of light sectors are toward the light from seaward. The nominal range of lights is expressed in nautical miles (NM) unless otherwise noted.

*The city of **Sault Ste. Marie, Ontario**, had a population of 81,000 in 1998. It has several manufacturing industries. Principal imports are coal, iron ore, iron ore concentrates, limestone and petroleum products. Exports are plate and sheet steel, pig iron, primary iron, steel, paper and forest products.*

*Sault Ste. Marie is a **Customs** vessel clearing station for commercial vessels and a vessel reporting station for pleasure craft.*

A Canadian Coast Guard marine radio station at Sault Ste. Marie is remotely controlled from Thunder Bay MCTS Centre, call sign VBA. Direct all calls to Thunder Bay radio (details are given in Radio Aids to Marine Navigation, Atlantic and Great Lakes).

Tugs are available.

The city has passenger, freight and express service and a transcontinental bus service. Sault Ste. Marie Airport, 20 km west of the city, is operated by the Department of Transport.

*The harbour is a Public Harbour administered by the Department of Transport. The harbour limits are defined as all the waters of the St. Marys River north of the International Boundary, west of a line drawn due south from the extremity of **Partridge Point** (46°31'N., 84°14'W.), and east of a line drawn south from **Pointe aux Pins** lighthouse, at **Pointe Louise**.*

The former Public wharf, now owned by Purvis Marine Ltd., is 0.8 mile SE of the SE entrance pier to the Sault Ste. Marie (Canada) Canal. It is a concrete structure extending 600 feet (183 m) SW from shore with an L-end extending 310 feet (94 m) NW. There are freight sheds and an oil pipeline on the wharf. In 1984, there were depths of 15 to 20 feet (4.6 to 6.1 m) along the east face of the wharf and depths of 20 to 24 feet (6.1 to 7.3 m) along the outer face of the L-end.

The west side of the wharf encloses a triangular basin. The basin entrance is 70 feet (21 m) wide with depths of 13 to 17 feet (4 to 5.2 m). The inner face of the L-end had depths of 12 to 14 feet (3.7 to 4.3 m) and the west face of the main wharf, 5 to 14 feet (1.5 to 4.3 m). The basin had depths of 12 to 17 feet (3.7 to 5.2 m) but the north end is shallow.

A three-sided wharf area faced with steel sheeting, close NW of the west entrance to the Canadian canal, forms part of the wharves and slip of the Algoma Steel Corporation Ltd. The SE face of this wharf is 490 feet (149 m) long, the SW face is 355 feet (108 m) long, and the NW face is 200 feet (61 m) long. The wharf has an elevation of 6 feet (1.8 m). Steel is loaded here.

A slip 1,800 feet (549 m) long and 240 to 150 feet (73 to 46 m) wide extends NW from the above-mentioned wharf. The NE side of the slip has a continuous concrete wharf face with an elevation of about 6 feet (1.8 m). Two mobile ore cranes unload coal and iron ore.

The SW side of the slip has a wharf face 400 feet (122 m) long with a deck elevation of 7 feet (2.1 m), close inside the entrance to the slip. Self-unloading vessels discharge limestone and gypsum at this berth.

 TO LUNA PIER MARINA BREAKWATER
 LIGHT 2 (LLNR 6455)**

In an effort to best serve the commercial and recreational mariners, the Coast Guard periodically reviews the Aids to Navigation on all waterways. We are always open to input from the public and commercial mariners.

We appreciate any input that you, the mariner, can provide us. Please take the time to fill out this questionnaire and return it to use by whatever means you decide is most convenient.
