U.S. Coast Guard to Test Automatic Identification System (AIS) Aids to Navigation (ATON)

In the near future, the U.S. Coast Guard and other authorized agencies and organizations (i.e., U.S. Army Corps of Engineers, Marine Exchange of Alaska) will begin transmitting AIS ATON messages and marine safety information via AIS for testing and evaluation. The exact content, location, and times of these broadcasts will be announced in future Local Notices to Mariners.

AIS is an internationally adopted radio communication protocol that enables the autonomous and continuous exchange of navigation safety related messages amongst vessels, lifeboats, aircraft, shore stations, and aids to navigation (AIS ATON). AIS ATON stations broadcast their presence, identity (9-digit Marine Mobile Service Identity (MMSI) number), position, and status at least every three minutes or as needed. These broadcasts can originate from an AIS station located on an existing physical aid to navigation (Real AIS ATON) or from another location (i.e., AIS Base Station). An AIS Base Station signal broadcasted to coincide with an existing physical aid to navigation is known as a Synthetic AIS ATON. An electronically charted, but non-existent as a physical aid to navigation, is identified as a Virtual AIS ATON. The latter two can be used to depict an existing aid to navigation that is off station or not watching properly or to convey an aid to navigation that has yet to be charted. All three variants can be received by any existing AIS mobile device, but they would require an external system for their portrayal (i.e., AIS message 21 capable ECDIS, ECS, radar, PC). How they are portrayed currently varies by manufacturer, but the future intention is for the portrayal to be in accordance with forthcoming International Standards (i.e., IEC 62288 (Ed. 2), IHO S-4 (Ed. 4.4.0)).

Mariners capable of receiving and displaying these test AIS messages are encouraged to provide feedback and report any anomalies to the USCG NAVCEN Website: <http://www.navcen.uscg.gov> | Contact Us Tab | Subject: AIS | Category: AIS Testing.

Autonomous Underwater Vehicle and Juvenile Salmon Tracking Project Summary

Reference Mooring Deployment

National Marine Fisheries Service, Auke Bay Laboratories

The National Marine Fisheries Service (NMFS), in partnership with the U.S. Geological Survey and Rutgers University, will be deploying temporary ocean moorings in Southern Chatham Strait near the Little Port Walter Research Station (LPW). The moorings are part of a research effort to assess the use of autonomous underwater vehicles (AUV) for conducting fisheries research and studying the outmigration of juvenile Chinook salmon.

Twenty-four reference moorings will be deployed; three will be placed approximately 3 kilometers north of LPW, three will be placed approximately 3 kilometers south of LPW, and eighteen will be near the mouth and within the Port Walter area. The moorings will have yellow or orange buoys and will be clearly labeled "NOAA RESEARCH". All moorings will be a minimum of 200 meters apart and at least 50 meters from the shore.

The moorings will be deployed between March 16 and March 26, 2016. All equipment associated with the study will be removed completely no later than December 15, 2016.

*Please contact **John Eiler** by e-mail at john.eiler@noaa.gov, or by telephone at (907)789-6033, if you need additional information regarding this project.*

AMSEA Workshops of Interest to Mariners in District 17

The Alaska Marine Safety Education Association is offering a number of classes in U.S. Coast Guard District 17 that may be of interest to mariners. Many of these workshops are offered at no cost to commercial fishermen, thanks to support from the U.S. Coast Guard, the National Institute for Occupational Safety and Health, and the Alaska Department of Commerce, Community and Economic Development. For more information or to register for a workshop, call AMSEA at 907-747-3287 or visit our website at www.amsea.org.

Fishing Vessel Drill Conductor Workshops

These workshops give participants hands-on training with emergency equipment that should be onboard any commercial fishing vessel, such as PFDs, life rafts, immersion suits, EPIRBs, fire extinguishers. Participants practice emergency procedures like man overboard, abandon ship, firefighting and flooding control.

The workshops are US Coast Guard-accepted and meet the training requirements for drill conductors on documented commercial fishing vessels operating three or more miles offshore. The workshops are open to all mariners and are recommended for captains and crew serving on any commercial vessel.
