The Executive Committee of the World Meteorological Organization approved at its thirty-third session Recommendation 36 (90-II) concerning an International System of Sea Ice Symbols which will come into effect on 1 October 1981.

The International System of Sea Ice Symbols should be used when plotting observed ice conditions on operational charts prepared by sea ice forecasters. It contains a uniform set of symbols as well as the details to be shown on sea ice charts intended for international shipping, particularly by means of facsimile transmissions.

At the request of the World Meteorological Organization this international system, attached hereto, is brought to the attention of all Member Governments for action as appropriate.
Annex to Recommendation 36 (80-CMM)

INTERNATIONAL SYSTEM OF SEA ICE SYMBOLS

1. **Use**

The international system of sea ice symbols is intended for use on synoptic and prognostic ice charts which are issued by national ice centres, either by radio facsimile or by mail, primarily to serve operational marine activities. Charts transmitted by ice observing units to users should also follow the international system. Additional symbols determined on the basis of regional or national requirements may be added, provided that they do not overlap or contradict the international system.

2. **Main elements**

The system encompasses ice elements and features which can be grouped under the following headings:

(i) Concentration (C)
(ii) Stage of development (S)
(iii) Form of ice (P)
(iv) Dynamic processes
(v) Water openings
(vi) Topography
(vii) Ice thickness
(viii) Stage of melting
(ix) Surface features
(x) Ice of land origin
(xi) Limits
(xii) Strips and patches

3. **Main symbol**

The basic data concerning concentration, stage of development (with amounts of up to three age classes) and form of ice are contained in a simple oval form (the egg; see appendix 2 for examples).

\[
\begin{array}{ccc}
C & C_a & C_b \\
C_a & S_a & S_b \\
S_a & F_a & F_b \\
C_b & S_b & C_c \\
S_b & F_b & F_c \\
C_c & C_d & C_e \\
\end{array}
\]

- \( C \) - Total concentration of ice in the area, reported in tenths (see code table in Appendix 1).

**Note:** Ranges of concentration may be reported; see example in Appendix 2.

- \( C_a \), \( C_b \), \( C_c \) - Partial concentrations of thickest (\( C_a \)), second thickest (\( C_b \)) and third thickest (\( C_c \)) ice, in tenths.

**Note:** Less than 1/10 is not reported. 10/10 of one stage of development is reported by \( C_a \) or \( S_a \) and \( F_a \) or \( C_b \) or \( S_b \) or \( F_b \).
Annex to Recommendation 36 (80-CMM)

INTERNATIONAL SYSTEM OF SEA ICE SYMBOLS

1. Use

The international system of sea ice symbols is intended for use on synoptic and prognostic ice charts which are issued by national ice centres, either by radio facsimile or by mail, primarily to serve operational marine activities. Charts transmitted by ice observing units to users should also follow the international system. Additional symbols determined on the basis of regional or national requirements may be added, provided that they do not overlap or contradict the international system.

2. Main elements

The system encompasses ice elements and features which can be grouped under the following headings:

(i) Concentration (C)
(ii) Stage of development (S)
(iii) Form of ice (F)
(iv) Dynamic processes
(v) Water openings
(vi) Topography
(vii) Ice thickness
(viii) Stage of melting
(ix) Surface features
(x) Ice of land origin
(xi) Limits
(xii) Strips and patches

3. Main symbol

The basic data concerning concentration, stage of development (with amounts of up to three age classes) and form of ice are contained in a simple oval form (the egg; see appendix 2 for examples).

\[ C_a \quad C_b \quad C_c \]
\[ S_a \quad S_b \quad S_c \]
\[ F_a \quad F_b \quad F_c \]

\[ C - \text{Total concentration of ice in the area, reported in tenths (see code table in Appendix 1).} \]
\[ C_a \quad C_b \quad C_c - \text{Partial concentrations of thickest (}C_a\text{), second thickest (}C_b\text{), and third thickest (}C_c\text{) ice, in tenths.} \]

\[ \text{Note: Ranges of concentration may be reported; see example in Appendix 2.} \]
\[ \text{Note: Less than } 1/10 \text{ is not reported. } 10/10 \text{ of one stage of development is reported by } C, S_a \text{ and } F_a \text{ or } C, S_a \text{ and } F_s. \]
ANNEX I

$S_a, S_b, S_c$ - Stage of development of thickest ($S_a$), second thickest ($S_b$) and third thickest ($S_c$) ice of which the concentrations are reported by $C_a, C_b, C_c$ respectively (see code table and symbols in Appendix 1).

Notes:

(1) If more than one class of stage of development remains after the selection of $S_a$ and $S_b$, $S_c$ should indicate the class having the greatest concentration of the remaining classes (see also Note (2)).

(2) Reporting of $S_a$, $S_b$, and $S_c$ should generally be restricted to a maximum of three significant classes. In exceptional cases, further classes can be reported as follows:

- with $S_o$ - stage of development of ice thicker than $S_a$ but having a concentration of less than 1/10;
- $S_d$ - stage of development of any other remaining class.

(3) No concentrations are reported for $S_o$ and $S_d$.

Form of ice ($F$) - Two variants are possible according to the ice conditions observed:

First variant

$F_a F_b F_c$ - form of ice (floe size) corresponding to $S_a, S_b$ and $S_c$ respectively (see code table in Appendix 1).

Notes:

(1) Absence of information on any one of these forms of ice should be reported with a "x" at the corresponding position.

(2) When icebergs are present in sufficient numbers to have a concentration figure, this situation can be reported with $F_a = 9$, the appropriate symbol for $S_a$ and the corresponding partial concentration $C_a$ (see example in Appendix 2).
Second variant

\[ F_p \quad F_s \quad F_p \quad F_s \]

- Predominant \((F_p)\) and secondary \((F_s)\) floe size, reported independently from \(S_a, S_b, S_c\) (see code table in Appendix 1).

Note: If only predominant floe size (form of ice) is reported, only the symbol for \(F_p\) shall be reported (see examples in Appendix 2).

4. Symbols for dynamic processes

- **Compacting**
- **Diverging**
- **Shearing**
- **Drift**

Supplementary procedures (optional):

- **Compacting:**
  - \(\rightarrow\) (degree) \(\rightarrow\)
  - degree: 1 - Slight compacting
  - 2 - Considerable compacting
  - 3 - Strong compacting

- **Drift:** (in tenths of knots) \(\rightarrow\) \(\rightarrow\) (e.g. 15 = 1.5 knots)

5. Symbols for water openings

- **Crack** \(\rightarrow\) (symbol indicating presence of cracks in the area)
- **Crack** \(\leftrightarrow\) (symbol for a crack at a specific location)
- **Lead** \(\rightarrow\) or \(\rightarrow\)
- **Frozen lead** \(\rightarrow\) (the orientation of the crosshatching may be varied to distinguish them from other crosshatching lines)

Supplementary procedures (optional):

- **Lead** \(\rightarrow\) (width) (width of lead in metres or kilometres, e.g. 100-300 m)

6. Symbols for topography features

- **Ridges/hummocks** \(f\) \(\rightarrow\) \(\rightarrow\) \(\overline{h}/h_x\)

Concentration (areal coverage) \(C\) in tenths

Frequency \(f\) in number per nautical mile (\(f\) is an alternative for \(C\))

Mean height \(\overline{h}\) and maximum height \(h_x\) are expressed in decimetres.

Note: The data for \(C\) or \(f\), \(\overline{h}\) and \(h_x\) are added where known.
Rafting

Concentration C as above to be added where known.

Windrow

7. **Symbol for ice thickness**

   Thickness measured \( t \) (in centimetres) \( E \)
   
   Thickness estimated \( \gamma' \)
   
   (example: \( \gamma'_{35'} \))

   When more than one measurement have been taken, both mean and maximum thickness are reported as shown:

\[
30/40_{\text{m}}
\]

8. **Symbol for stage of melting**

   Stage of melting \( m_s \)
   
   (see code table for \( m_s \) in Appendix 1)

9. **Symbol for surface features**

   Snow cover:

   \( C \)

   \( C \) - concentration (areal coverage) in tenths
   
   \( s \) - snow depth, according to WMO Code 3800

The orientation of the symbol will show the direction of sastrugi, as follows:
10. **Symbols for ice of land origin**

\[ \begin{array}{ll}
\text{n} & \text{Growler and/or bergy bit} \\
\triangle & \text{Iceberg (size unspecified)} \\
\triangle & \text{Iceberg, small} \\
\triangle & \text{Iceberg, medium} \\
\triangle & \text{Iceberg, large} \\
\triangle & \text{Iceberg, very large} \\
\end{array} \]

(n = number from WMO Code 2877)

\( \text{YY} \) day of month sighted

\( \text{Ice island} \)

\( \text{Radar target (suspected berg)} \)

\( \text{Ice of sea origin: Floeberg} \)

**Note:** The right-hand column of symbols may be used when many bergs are present but actual numbers are not known.

**Specification of icebergs** (as established by the International Ice Patrol Service):

<table>
<thead>
<tr>
<th>Size</th>
<th>Height (m)</th>
<th>Length (m)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Growler &amp; Bergy Bit</td>
<td>up to 5</td>
<td>less than 15</td>
</tr>
<tr>
<td>Iceberg, small</td>
<td>6-15</td>
<td>16-60</td>
</tr>
<tr>
<td>Iceberg, medium</td>
<td>16-45</td>
<td>61-122</td>
</tr>
<tr>
<td>Iceberg, large</td>
<td>46-75</td>
<td>123-213</td>
</tr>
<tr>
<td>Iceberg, very large</td>
<td>over 75</td>
<td>more than 213</td>
</tr>
</tbody>
</table>

**Note:** Sizes refer to the above-water portion only. If height and length of a berg fall into different size classifications, use the larger size. Dimensions (in kilometres) of a tabular berg or ice island may be indicated beneath the symbol.

11. **Symbols for limits**

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>⎟ ⎟ ⎟ ⎟</td>
<td>Undercast</td>
</tr>
<tr>
<td>⎟ ⎟</td>
<td>Limit of visual observations</td>
</tr>
<tr>
<td>⎟ ⎟</td>
<td>Limit of radar observations</td>
</tr>
<tr>
<td>⎟ ⎟</td>
<td>Ice edge by radar</td>
</tr>
<tr>
<td>⎟ ⎟</td>
<td>Observed edge or boundary</td>
</tr>
<tr>
<td>⎟ ⎟</td>
<td>(Visual or satellite)</td>
</tr>
<tr>
<td>⎟ ⎟</td>
<td>Estimated edge or boundary</td>
</tr>
</tbody>
</table>
12. **Symbol for strips and patches**

Strips and patches \( \infty C \)

\( C \) – concentration in tenths of ice within the area of strips and patches (optional addition).

The symbol \( \infty C \) is placed within the main "oval" symbol in the section reserved for "Form of ice" (see Example in Appendix 2).

13. **Supplementary procedures for indicating total concentration**

In order to facilitate readability of the chart, ice-covered areas may be hatched according to total ice concentration. Hatching may be applied to all areas of ice concentration or only to some of them. Whenever hatching is applied, the hatching symbols as shown underneath shall be used. No international rules are given for the spacing or thickness of the hatching lines: the thickness may be the same throughout all hatched areas, or may vary in the sense that thickest lines are used for areas of thicker ice.

14. **Symbols for the hatching of total concentration of sea ice**

<table>
<thead>
<tr>
<th>Concentration</th>
<th>Fast ice</th>
<th>with national variation of hatching to show stage of development</th>
</tr>
</thead>
<tbody>
<tr>
<td>10/10</td>
<td>Compact</td>
<td><img src="#" alt="Consolidated pack ice symbol" /></td>
</tr>
<tr>
<td>9-10/10</td>
<td>Very close pack ice</td>
<td><img src="#" alt="Very close pack ice symbol" /></td>
</tr>
<tr>
<td>7-9/10</td>
<td>Close pack ice</td>
<td><img src="#" alt="Close pack ice symbol" /></td>
</tr>
<tr>
<td>4-6/10</td>
<td>Open pack ice</td>
<td><img src="#" alt="Open pack ice symbol" /> (Line spacing is twice that of close pack ice)</td>
</tr>
<tr>
<td>1-3/10</td>
<td>Very open pack ice</td>
<td><img src="#" alt="Very open pack ice symbol" /></td>
</tr>
<tr>
<td>&lt;1/10</td>
<td>Open water</td>
<td><img src="#" alt="Open water symbol" /></td>
</tr>
<tr>
<td>0</td>
<td>Ice free</td>
<td><img src="#" alt="Ice free symbol" /></td>
</tr>
<tr>
<td></td>
<td>Bergy water</td>
<td><img src="#" alt="Bergy water symbol" /></td>
</tr>
<tr>
<td></td>
<td>Presence of new ice</td>
<td><img src="#" alt="Presence of new ice symbol" /> (symbols may be scattered)</td>
</tr>
</tbody>
</table>
15. Additional symbols for regional use

Symbol adopted for use in the Baltic Sea area:

Level ice

(Line spacing is twice that of close pack ice)

Appendices: 2

</tbody>
</table>
Notes:

(1) Use of symbols (figures):

On the horizontal line giving $S_{o}$ $S_{a}$ $S_{b}$ $S_{c}$ $S_{d}$ only one dot (·) is to be placed to indicate the distinction between classes of any ice having a thickness over 70 cm (symbols 1. to 9.) from classes with thickness below 70 cm (symbols 1-9).

Examples:

$$S_a = 2.5.2 \quad \quad \quad S_a = 2.6 \quad \quad \quad S_a = 2.5$$

$$S_b = 2.5.1 \quad \quad \quad S_b = 2.5.3$$

$$S_c = 2.4 \quad \quad \quad S_c = 2.5$$

$$S_o = 2.6 \quad \quad \quad S_o = 2.5.1a$$

$$S_a = 2.5.3 \quad \quad \quad S_a = 2.4.2$$

$$S_b = 2.5.1 \quad \quad \quad S_b = 2.1$$

$$S_c = 2.4$$

(2) The dot-symbol which indicates a distinction between classes of stage of development should be placed midway between the top and the bottom of the figures.

(3) Thickness figures for old ice, second-year ice and multi-year ice will be included in this table pending appropriate revision of the International Sea Ice Nomenclature. The separation of thin first-year ice into first and second stages (2.5.1a and b) will also be addressed at the same time.
### Form of ice

\( (P_a, P_b, P_c, P_p, P_s) \)

<table>

</tr>
</tbody>
</table>
EXAMPLES OF THE USE OF THE "OVAL" SYMBOL

Example 1

\[
\begin{array}{c}
8 \\
3.5 \\
1.7 \\
x 3
\end{array}
\]

8 tenths of ice; 3 tenths of medium and 5 tenths of thin first-year ice; floe size of medium first-year ice is not known; the floe size of thin first-year ice is small floe.

Example 2

\[
\begin{array}{c}
8 \\
1.7 \\
3
\end{array}
\]

8 tenths of ice; medium and thin first-year ice of which the partial concentrations are not given; predominant floe size is small floe.

Example 3

\[
\begin{array}{c}
10 \\
6.3
\end{array}
\]

10 tenths of ice; first-year and young ice of which the partial concentrations are not given; no information on form of ice (this example applies particularly to satellite data).

Example 4

\[
\begin{array}{c}
6 \\
5.4
\end{array}
\]

6 tenths of ice in big and medium floes; stages of development not given and therefore there are no partial concentrations.
Example 5

6 tenths of ice; 2 tenths concentration of ice berge, one tenth of old ice and 3 tenths of gray-white ice; the floe size of old ice is medium floe.

Example 6

3 to 4 tenths of ice; all thin first-year ice of 30-50 cm thickness; in strips and patches where the concentration is 9 tenths. (With one stage of development, indication of partial concentration is not needed).

Example 7

6 tenths of ice; no other details given.

In general, throughout the symbology solid lines are used for observed data and dashed lines for estimates. For indicating estimates in the "oval", see following examples.

Resolution 4 (EC-XXXIII)

INTERNATIONAL SYSTEM OF SEA ICE SYMBOLS

THE EXECUTIVE COMMITTEE,

NOTING strong requirements expressed by both operational and research users for the development of a uniform system of sea ice symbols,

CONSIDERING that the adoption of an international system of sea ice symbols permits the development of a uniform system for the digitization of sea ice information for international exchange,

APPROVES Recommendation 36 (80-CMM) - International system of sea ice symbols - effective from 1 October 1981,

REQUESTS the Secretary-General to include the International System of Sea Ice Symbols in WMO Publication No. 259 - WMO Sea Ice Nomenclature, as well as in WMO Publication No. 471 - Guide to Marine Meteorological Services.
