New Orleans Harbor - New Orleans To Baton Rouge/General/MSIB	MSIB	Mississippi River, Mile 219.0 to 229.0, AHOP - Port Allen Canal - Port Allen Lock - High Water Safety Advisory --- From: 2025-04-08 To: Until Further Notice --- The Baton Rouge Gauge is expected to reach 38 ft and continue to rise, therefore, the U.S. Coast Guard COTP New Orleans has issued a Safety Advisory for waters of the Lower Mississippi River (LMR), from Mile 219.0 to Mile 229.0, AHOP. In accordance with the Waterway Action Plan Baton Rouge Annex, for the Port Allen Lock and LMR: 1. All tows greater than 600 ft (excluding the towboat) are required to employ an assist vessel of at least 1200 hp when entering or exiting the Port Allen Lock. 2. All tows exiting the Port Allen Lock intending to turn northbound shall use an assist vessel of at least 1200 hp or proceed southbound below Mile 221.0 before heading north. 3. Approval must be granted by the VTS prior to exiting the Port Allen Lock and turning northbound. 4. If a vessel is unable to meet horsepower requirements and permission is obtained to enter the RNA from VTS LMR, then an assist vessel of at least 1200 hp is mandatory for entering and exiting. 5. Tows are required to have 280 hp per standard loaded barge on canal tows entering/exiting the Locks. Empty barges may be calculated at 1/2 the horsepower requirements to that of a loaded barge when computing the overall horsepower requirement. Towing vessels with Z-drive propulsion type may be treated as having a horsepower 20% greater than its engine's rating for the purpose of this calculation. VTS has authority to grant exceptions to these requirements up to 400 hp based on conditions and the size of the tow. 6. The Port Allen Lock has a max tow size of 1,050 ft, including the towing vessel. **Mariners are reminded that when the Mississippi River at Baton Rouge reaches +41.0 ft: Multi-vessel tow lockings from the river will be prohibited when 1 tow is greater than 600 ft long. Light boats will be allowed to lock with them. Empty barge tows will be required to double wrap the floating bit.**
