SECTION I - SPECIAL NOTICES

This section contains information of special concern to the Mariner.

NOTICE OF PLATFORMS, DRILL RIGS AND ATTENDANT VESSELS

The drill rigs and vessels that have been temporarily established will display lights and sound signals, according to size or class, during periods of darkness and reduced visibility. Numerous large anchor buoys which may be lighted displaying a white 4-seconds characteristic light and unlighted buoy may be established up to 2,000 or more yards from the vessel or rig site. Mariners should avoid passing close aboard the rigs or vessels. Offshore structures that have been established will display lights and a fog signal sounding 1 blast (2-sec. blast) every 20-seconds. Mooring buoys (white with blue band) may be located within 500 yards of the structure for mooring attendant vessels and/or barges. Mariners should avoid passing close aboard structures.

GPS TESTING

At times, throughout our area or responsibility, multiple U.S. Government Agencies conduct GPS testing. These tests vary in duration, affected range from the test site and potential impact to the maritime user as they may affect systems that rely on GPS such as E-911, AIS and DSC. More information is available at the U.S. Coast Guard Navigation Center Website, <https://www.navcen.uscg.gov>. During these periods, GPS users are encouraged to report any GPS outages that they may experience, to the Navigation Information Service (NIS) by calling (703) 313-5900 or by using the NAVCEN Website to submit a GPS problem report.

SPECIAL NOTICE - HURRICANE SEASON

The hurricane season is considered to extend from June 1, 2022 through November 30, 2022. Tropical storms and hurricanes often develop with little warning. Extensive damage to small craft often results in loss of life. All mariners, particularly operators of small fishing vessels, are reminded that advanced planning which might prevent loss of vessel and crew should include:

- (a) Instruction of crew and passengers in location of emergency equipment and emergency procedures.
- (b) Presailing check of vessel, machinery, and equipment for seaworthiness.
- (c) Installation of strong ground tackle.
- (d) Review of storm center evacuation procedures.
- (e) Knowledge of nearest hurricane shelter or port.
- (f) Constant radio watch on VHF-FM Channel 16 and frequent monitoring of VHF-FM Weather Channel for National Weather Service Broadcasts.

Due to tropical storms and hurricanes, mariners should be aware that aids to navigation along the coasts of Florida, Alabama, Mississippi, Louisiana and Texas, and on structures in the Gulf of Mexico and surrounding waters may have been damaged or destroyed. Lighted and unlighted buoys may have been moved from charted position, damaged, sunk, extinguished, or otherwise made inoperative. Mariners should not rely completely upon the position or operation of an aid to navigation, but should also employ such other methods of determining position as may be available. Wrecks and submerged obstructions may have been moved from charted locations and pipelines may become uncovered or moved, due to the force of storm surges. Storm surge and winds may create shoals in affected waters. The U.S. Aids to Navigation System marking wrecks and obstructions is intended for use with nautical charts. The exact meaning of a particular aid to navigation may not be clear to the mariner unless the appropriate nautical chart is consulted. Virtually all U.S. lateral marks are located in International Association of Marine Aids to Navigation and Lighthouse Authorities (IALA) Region B and follow the traditional 3R rule of red, right, returning. In U.S. waters, returning from seaward and proceeding toward the head of navigation is generally considered as moving westerly along the Gulf Coast. Mariners should exercise caution and report aid to navigation discrepancies and hazards to navigation to the nearest Coast Guard unit.

During the hurricane season, drawbridges along the coast may deviate from normal operating procedures. Some bridges may be unable to open because of high winds. Others may be authorized extended closed periods to facilitate evacuation of land traffic. Mariners should anticipate bridge closures by listening to the National Weather Service and Coast Guard Broadcasts on hurricane conditions. Because of the uncertainty of hurricane movements and bridge closures, mariners are urged to seek passage through drawbridges well in advance of the arrival of gale force winds.

Locks and Navigation Structures are operated to pass navigation until such time, that water levels and wind conditions warrant operations unsafe. The structures are then closed in accordance with hurricane preparation procedures. Mariners will be given as much notice as possible when structures are to be closed. However, these structures may be closed on short notice well in advance of the actual storm. Mariners are advised to seek safe harbor as soon as possible.

SPECIAL NOTICE - HURRICANE SEASON

Mariners are advised that the Hurricane Season extends from June 1, 2022 to November 30, 2022.

Locks and Navigation Structures operated by the U.S. Army Corps of Engineers will attempt to pass navigation until such time that water levels and wind conditions render operations unsafe. The structures are then closed in accordance with Hurricane procedures.

Mariners will be given as much notice as possible when structures are to be closed. However, these structures may be closed on short notice well in advance of the actual storm. Mariners are advised to seek safe harbor as soon as possible.

GULF OF MEXICO - OCEANOGRAPHIC RESEARCH BUOYS

Commencing July 6, 2022 and continuing until approximately November 30, 2022, Oceanographic research buoys will be temporarily established offshore of several locations, in the Gulf of Mexico, bound by the following positions:

12.4 miles off Corpus Christi, TX., 27-43-27.52N 097-00-10.18W,
16.5 miles off Galveston, TX., 29-04-53.49N 094-39-49.81W,
18 miles off Pascagoula, MS., 30-03-18.81N 088-28-29.06W,
8 miles off Perdido Beach, AL., 30-09-14.01N 087-33-29.83W,
2.3 miles off Pensacola, FL., 30-17-56.55N 087-08-04.79W,
2.8 miles off Fort Walton Beach, FL., 30-21-19.35N 086-36-35.91W and
3.8 miles off Panama City, FL., 30-08-39.71N 085-52-09.67W.

The buoys that will be moored at each location are yellow spherical shape floating on the surface, of approximately 16-inches in diameter; roughly

the size of a basketball, showing an amber-colored strobe light; flashing every 2.5 seconds. The buoys will gather observations of waves, winds, sea surface temperature, barometric pressure, and buoy location and send data via satellite for analysis of hurricane storm surge conditions. All buoys will be moored in approximately 20 meters of water and monitored for performance and drift; any contingencies will be handled by Sofar Ocean of San Francisco, CA., <https://www.sofarocan.com>.

SUNSET OF NOAA PRINTED CHARTS

**** Cancellation of NOAA Paper and Raster Nautical Charts ****

The National Oceanic and Atmospheric Administration (NOAA) is undertaking a multi-year program to end production and maintenance of its suite of over 1,000 traditional paper nautical charts and all associated raster chart products and services, including: Print-on-Demand (POD) paper nautical charts, Full-size chart PDF files, BookletChart™ PDF files, NOAA raster navigational charts (NOAA RNC®), the NOAA RNC tile service, and the online RNC viewer. Six months notice of the intent to cancel a specific chart is provided in a "Last Edition" notice. The final cancellation of a chart is made in a "Canceled" notice. Both types of notices will appear in LNM Section IV, "Chart Correction". A comprehensive list of all canceled NOAA charts is available at: <http://www.charts.noaa.gov/MCD/Dole.shtml>. Traditional paper nautical chart production is ending to enable the creation and maintenance of larger scale, more up-to-date, higher quality coverage of NOAA's electronic navigational chart (NOAA ENC®) product. This will significantly enhance the amount of charted detail available to mariners. More information about NOAA's program to sunset traditional paper charts is on the NOAA Coast Survey website at:

<https://nauticalcharts.noaa.gov/charts/farewell-to-traditional-nautical-charts.html>

An online NOAA Custom Chart application at: <https://devgis.charttools.noaa.gov/pod> is available to create chart images from ENC data, which may then be printed. Notices to Mariners will not be issued for NOAA Custom Charts.

LA - MISSISSIPPI RIVER - Old River Lock

Continuing until approximately July 31, 2022, due to repairs on the Lock Emergency Bulkhead Lowering Carriage, and the procedures contained in this bulletin, tows entering the Lock are urged to use extreme caution while approaching and entering the lock chamber. While approaching the Lock, the following are required for passage:

1. Tows are to enter the Lock at DEAD SLOW speed.
2. All tows are restricted to no longer than 1,100 feet in length.
3. All tows will line up along the floating guidewall before proceeding.
4. Two line-handlers with life vests and bumpers will be required on both approach and exiting of the Lock.
5. Vessels must be moored by bow and stern lines to floating timberheads.

Again, use extreme caution when locking through Old River Lock. The Lockmaster, Anthony T. Lindsly, can be reached at (225) 492-3333, for up-to-date information. The point of contact with the USACE New Orleans District is Russell Beauvais, at (225) 492-2169.

SECTION IV - CHART CORRECTIONS

This section contains corrections to federally and privately maintained Aids to Navigation, as well as NOS corrections.

This section contains corrective actions affecting chart(s). Corrections appear numerically by chart number, and pertain to that chart only. It is up to the mariner to decide which chart(s) are to be corrected. The following example explains individual elements of a typical chart correction.

Chart Number	Chart Edition	Edition Date	Last Local Notice to Mariners	Horizontal Datum Reference	Source of Correction	Current Local Notice to Mariners
12327	91st Ed.	19-APR-97	Last LNM: 26/97	NAD 83		27/97

Corrective Action	Object of Corrective Action				Position	

(Temp) indicates that the chart correction action is temporary in nature. Courses and bearings are given in degrees clockwise from 000 true. Bearings of light sectors are toward the light from seaward. The nominal range of lights is expressed in nautical miles (NM) unless otherwise noted.

LA - MORGAN CITY TO PORT ALLEN ALTERNATE ROUTE - Channel Condition

Based on information provided by the National Weather Service, the Atchafalaya River Gauge has reached and is forecasted to remain above 3.0 feet. In accordance with 33 Code of Federal Regulations (CFR) 165.811, the following highwater restrictions are in place for the designated Regulated Navigation Area (RNA) that encompasses the Atchafalaya River in the vicinity of the Morgan City Triple Span Bridges (The Bridges), including the waters extending 2,000 yards north of the Highway 90 Bridge and 4000 yards south of the Morgan City Railroad Bridge (MCRRB). Towing on a hawser is not authorized, except that one self-propelled vessel may tow one other vessel without barges northbound.

Max length of tow remains 1,180 feet, when transiting The Bridges.

Max length of double wide tows (70 feet wide) remains 600 feet, when transiting The Bridges.

Tows with a box in the lead must not exceed 400 feet in length.

Minimal available horsepower requirements in accordance with 33 CFR table 165.811(e) are in effect. A 5% variance from the available horsepower is authorized.

Towing certain dangerous cargo (CDC) barges as defined in 33 CFR 160.202, shall have at least 600 horsepower available or three times the length of tow, whichever is greater.

Use of assist boats to meet required horsepower criteria:

North and southbound tandem tows shall have at least 50% of the required horsepower wired-in when transiting The Bridges. Once the condition is met, an assist boat may be used to make up the remaining horsepower deficit.

North and southbound double wide tows shall have at least 75% of the required horsepower wired-in when transiting The Bridges. Once that condition is met, an assist boat may be used to make up the remaining horsepower deficit. To be in compliance with this requirement, tows must ensure the assist boat is ready and in position to provide immediate assistance throughout the entire transit through the Regulated Navigation Area (RNA).

A strong eddy exists, at Mile 99.0, on the Atchafalaya River.

Any tows greater than 400 feet, traveling northbound on the Atchafalaya River and turning westbound onto the Intercoastal Waterway (ICW), at Mile 99.0, must have an assist boat at the turn.

Navigating vessels in high water conditions increases the risk of casualties. Mariners are reminded of their ongoing responsibility to conduct and manage their required navigation assessments and voyage plans to prepare bridge teams for encountering known hazards. Vessel operators are strongly encouraged to continuously evaluate the experience of their mariners operating in high water conditions and consider ensuring more experienced wheelmen are on watch during critical stages of the voyage or using "POSTED" wheelmen to transit through high risk areas. For further information on this advisory, mariners can contact Vessel Traffic Service Berwick Bay, at(985) 380-5370 or via VHF-FM Channel 11. LA - ATCHAFALAYA RIVER, MILE 113.0 TO MILE 117.0 - Channel Conditions, COTP Restrictions

Despite recent dredging of Stouts Pass at Mile 113.0 to Mile 117.0, on the Atchafalaya River, current Army Corps of Engineers hydrographic surveys revealed extensive shoaling continues to create challenging width and depth channel conditions. Mile 115.5 to Mile 117.0, in particular, pose significant navigation challenges. In addition, hydrographic surveys revealed active underwater pipelines that cross Little Island Pass at an unknown depth, posing a potential hazard to navigation and the environment. Therefore, Little Island Pass, Middle Island Pass and Riverside Pass are closed to commercial vessel traffic. The following COTP restrictions remain in effect from the Atchafalaya River Mile 113.0 to Mile 117.0:

- A. All mariners must check in with U.S Coast Guard Vessel Traffic Service Berwick Bay, at Mile 110.0, on the Atchafalaya River.
- B. Vessels shall not meet or overtake between these mile markers.
- C. All tows are required to have a draft no greater than 10.0 feet.
- D. All tows shall have a maximum length of 600 feet and maximum width of 70 feet.
- E. Any tows with a length greater than 400 feet are strongly advised to have an assist vessel while transiting this area.
- F. Vessels are highly recommended to use the Port Allen Alternate Route.
- G. Vessels electing to operate in Little Island Pass do so at their own risk, Little Island Pass is not federally regulated and is outside the marked and maintained navigable channel, which is Stouts Pass. Vessels electing to operate in Little Island Pass may be subject to regulations by other local, state or federal government agencies.

The U.S Coast Guard sets advisories based on the information obtained on the hydrographic surveys conducted by the Army Corps of Engineers. These surveys should be considered during voyage planning and can be found at the USACE Website: <https://www.mvn.usace.army.mil/> under missions > navigation > channel surveys. Mariners are advised that hydrographic surveys show water depths at the time of the surveys and shoaling in this area changes daily. In addition mariners should not rely on buoy locations to mark shoaled areas. All mariners transiting through Morgan City should report any hazards to navigation to U.S Coast Guard Vessel Traffic Service Berwick Bay, at (985) 380-5370. Conducting proper navigation assessments, or voyage planning, is critical for mariners to be aware of known hazards to be encountered during a voyage. Vessels found to be in violation of any federal law or regulation may subject the owner/operator to civil penalties. Credentialed mariners that violate this COTP navigation restriction or federal law or regulation may be subject to suspension or revocation actions. Callan Marine LTD is starting the dredging operations for the Port of Galveston in the Galveston Ship Channel. We will be dredging several docks along the channel from Galveston Yacht Basin to Pier 41 T Head. Subline will be utilized in several locations along the channel to access these docks. These locations are listed below as well as a drawing indicating approximate location for each line. We request that no fishing or trolling activities take place along or within the area of our subline, to avoid damage to nets or our pipe. This project will use a cutter suction dredge (General Eisenhower) to remove maintenance material in the Port of Galveston; and transporting the material via pipeline to a designated disposal area on Pelican Island. Dredging area dimensions are listed below for each dock expected during this dredge cycle. The project has commenced, and we request a Notice to Mariners to inform vessels of our presence. The project is expected to last approximately 45 days. The scope of the project will be confined to berths as listed below. All coordinates are approximate for the purpose of identifying the general areas.

Current Operations:

Great Lakes Dredge and Dock Company, LLC (GLDD) will commence initial dredging activities on or between April 6th thru April 10th, 2022 for the Houston Ship Chanel (HSC) and Bolivar Roads (BRC) EXPANSION CHANNEL IMPROVEMENT PROJECT (ECIP) PROJECT 11: BOLIVAR ROADS TO REDFISH HSC STA 138+369 TO HSC STA 73+476. The Dredge 54 will begin to remove material from the HSC **between approximate channel markers Green 53/Red 54 and Green 41/Red 42** and place material at a designated offshore disposal area in the Gulf of Mexico using material transport scows towed by tugs. These Scows hold approximately 8,900 CY of material.

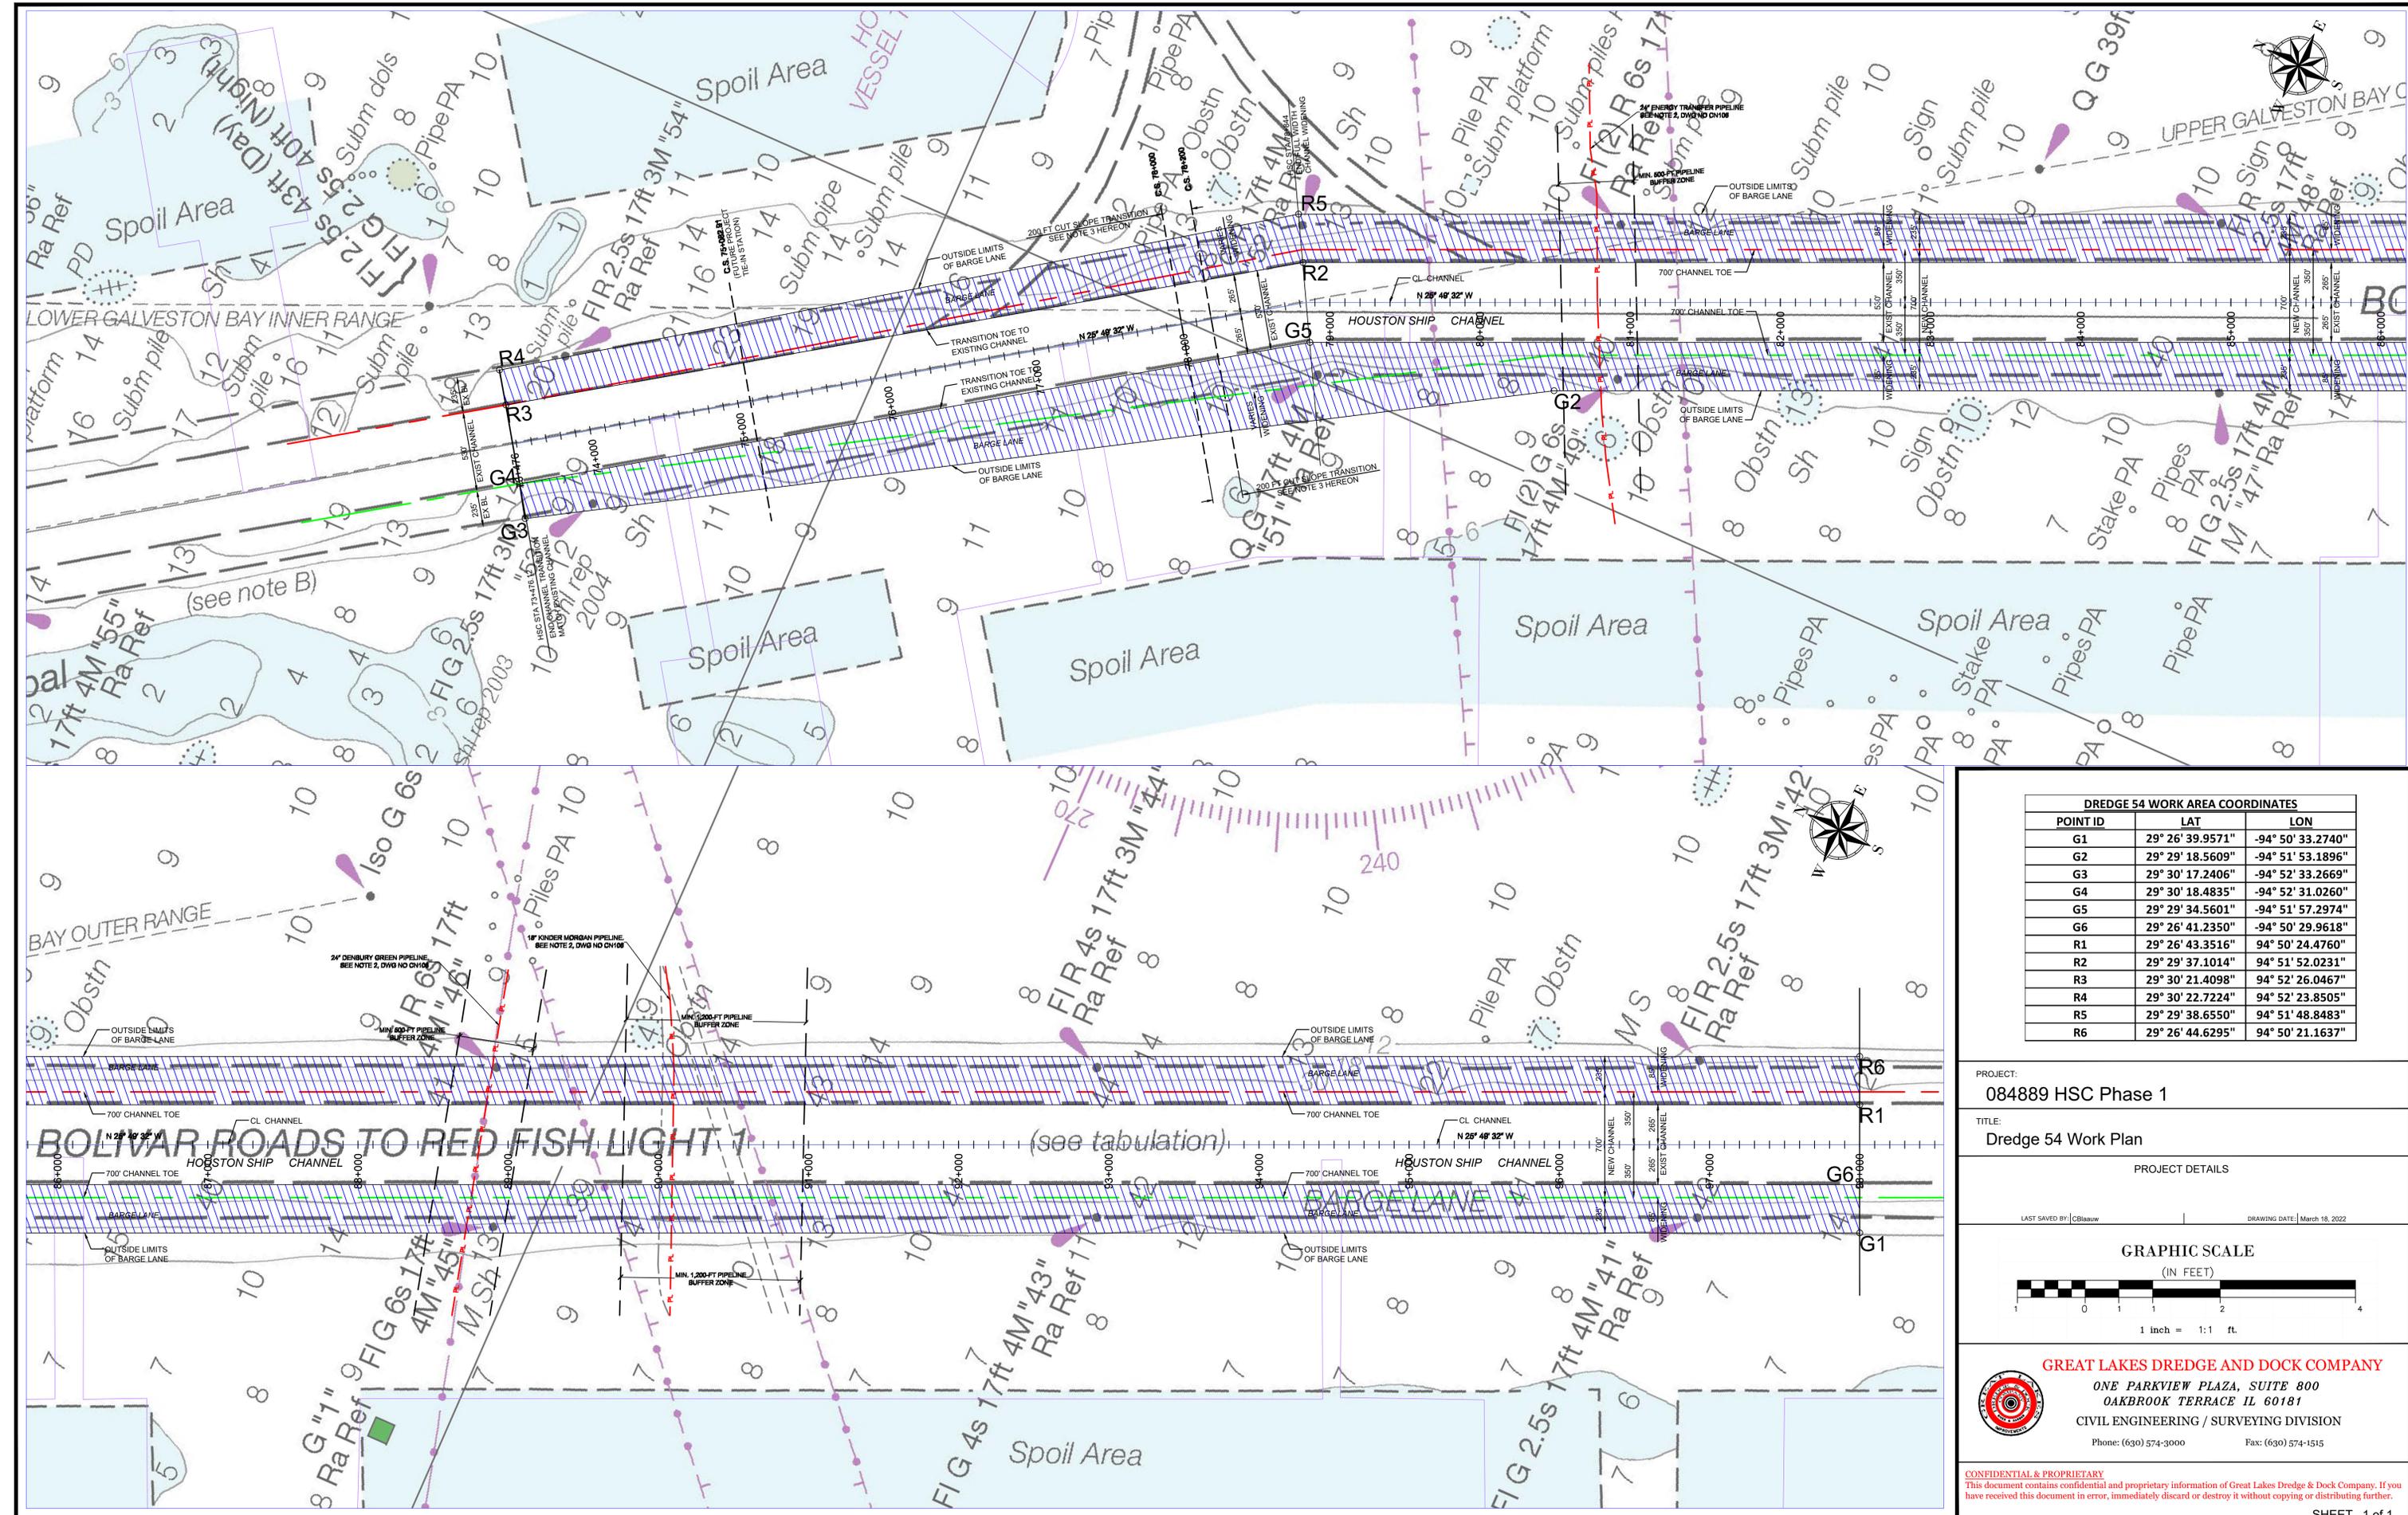

Mariners are urged to use extreme caution in the area and to transit at their slowest safe speed to minimize wake and proceed with caution after passing arrangements have been made. GLDD understands that circumstances that warrant specific maritime precautions must be handled on a case-by case basis in coordination with the local U. S. Coast Guard representatives. GLDD requests that the U.S. Coast Guard disseminate information provided in this notification to the general maritime community through Local Notice to Mariners publications and marine band broadcasts.

GLDD will continue to report project updates on status and equipment location changes as needed throughout the duration of the project via e-mail and/or phone. Should you have any questions concerning this project, please contact GLDD Site Manager Shohei Ishikawa (630-217-1487) SIsaikawa@gldd.com or Project Manager Nicholas Williams (630-247-2256) NDWilliams@gldd.com
